IOT BASED WATER LEAKAGE DETECTION AND CONTROL SYSTEM USING MOBILE APP

Jeyabharathi, S.Madumidha

Dr. Jeyabharathi, Assistant Professor, Department of Information Technology, Sri Krishna College of Technology, Coimbatore, India.

Ms.S.Madumidha, Assistant Professor, Department of Information Technology, Sri Krishna College of Technology, Coimbatore, India.

Abstract

In most cases, the harmful effects associated with the occurrence of leaks may present serious problems and, therefore, leaks must be quickly detected, located and repaired. The problem of leak even becomes more serious when it is concerned with the vital supply of fresh water to the community.

The countries where water is scarce, leaking in water networks has been a very significant problem worldwide,. This issue has inspired to design and develop an Automatic Water Leakage Detection and Prevention System AWDPS .

In accordance to this the proposed system automatically alerts the area manager as well as reduces the water level in the particular area pipes when the crack/leakage is detected. Therefore, this approach has been limited to large leaks and reduces the cost in the economical society. This project helps to detect the water leakage accurately in the pipelines and to prevent water wastage in its initial stage.

Happy Teacher's Day

A Teacher is a friend and guide of our life who also imparts good values in us. Teacher's take their best efforts to turn the students into responsible citizen. Teacher's play a very important role in each one of our lives.

A Teacher

I've come to a frightening conclusion that I am the decisive element in the classroom. It's my personal approach that creates the climate. It's my daily mood that makes the weather as a teacher, I poses a tremendous power to make a child's life miserable or joyous I can be a tool of torture or an instrument of inspiration. I can humiliate or heal. In all situations, it is my response that decides whether a crisis will be escalated or de-escalated and a child humanized or dehumanized.
