Abstract

Internet of Things (IoT) has practically facilitated the option of connecting devices that necessitates cooperation through the Internet. The IoT environment comprises of self-configuring and smart objects that have the possibility of interacting with one another using the infrastructure of a global network. Clustering is the predominant approach that potentially works on the improvement of network lifetime. In this paper, a new clustering scheme using

(57) Abstract :
Smart and automated billing system for shopping malls is the proposed invention. The present invention relates to the field of smart and automated billing system for shopping centres or malls which is the need of the hour to avoid long queues during this high time of pandemics. The invention focuses on developing a device that supports billing of articles or products and facilitates payment of billed amount through the same. The system will indicate the persons who have paid for their items through green light and let them go.
