BOOK REVIEW

EDITOR - IN - CHIEF
Dr A BALAMURUGAN
PROFESSOR & HEAD, CSE

CO-EDITORS
Dr P Manju, ICE,
Dr T Rajesh Kumar, IT
Mr N Karthikeyan, SoM
Ms R Kalpanasonika, CSE

MEETINGS & DISCUSSIONS

ICE Department- Faculty members Mr. Dilip Kumar, Mr. K. Saravana Kumar, Mr. J. Dhanaselvam and Dr. T. Chinnadurai conducted Placement assistance meeting with Final year students

Mechanical Department – Dr.P.Prathap HoD/ Mech had a discussion with Faculty Members about the workshop which attended at VIT on the topic “Quality enhancement in assessment and evaluation methodology of learning in higher education

Civil Department - Academic audit was done in the department

EEE Department - Stock verification committee members had a meeting to discuss about Stock verification of Engineering departments

EEE Department – Presentation of OBE based course information by the course coordinators.

PLACEMENTS

Third year students from all departments have attended Face Pre-Assessment Test at different Labs.

ALUMNI CORNER

I am now an entrepreneur for nearly 5 years successfully running my own company UPDATE STUDIOS, Coimbatore. I still remember the first time I won a short film contest in SKCT and that was the starting point of my career. From then on, the responsibilities and opportunities they gave me made me find my inner potential. I am overwhelmed by the recognition I am receiving from SKCT and my teachers till today. According to me, if every college finds the students' right field of interest and talent and encourage them to work passionately, then their talent will eventually reach out to the world and they will become a star.

He is now Doing postproduction for the top YouTube channel Eruma saani and Nakkalites and also Finished one movie as a sound designer.

-Mr.Shamir Mohammad
- Alumnus-2012 IT Department

10 Healthy Lifestyle Tips

- + Eat a variety of foods*
- + Base your diet on plenty of foods rich in carbohydrates*
- + Replace saturated with unsaturated fat*
- + Enjoy plenty of fruits and vegetables*
- + Reduce salt and sugar intake*
- + Eat regularly, control the portion size*
- + Drink plenty of fluids*
- + Maintain a healthy body weight*
- + Get on the move, make it a habit!*
- + Start now! And keep changing gradually.*

RESEARCH

Mr.Dhivagar Assistant Professor, Mechanical Engineering-SKCT is assigned as reviewer for International conference on New energy and Future Energy System from July 21-24, 2019 at Macau, China.

Dueling neural networks bring imagination to AI

Machines learning systems can't create their own things because they don't have imagination. But it seems like the solution has been found. In 2014 Ian Goodfellow, a Ph.D. student at the University of Montreal came up with the idea of a generative adversarial network or GAN which might well be the solution that data scientists have been looking for.

The idea of this approach is to train two neural networks on the same dataset and make them play a so-called "real or fake" game. Here are the rules: let's assume our **neural networks** have been trained on the images of cats. One of these networks needs to create variations on images it has seen (for example, it can add an extra tail to a cat in the picture). The other network gets to decide which of these images is like the one it has been trained on (the real image) and which one is created by the generator (the fake image). With time the neural network that needed to create variations on images will learn how to do it really well so the other network couldn't spot the difference between real and fake.

Researchers have been doing experiments using GAN and they have already achieved some great results. For instance, in one experiment, a neural network could create credible faces of people who don't exist. Dueling neural networks open an opportunity for data scientists to create entirely synthetic datasets that can be used for training machine learning models

Title: [Armageddon of a Different Order: Wake Up, America](#)

Author: Dennis Dawson Elliott

"The world is losing respect for the United States because the president has demonstrated he cannot be trusted."

In a series of essays focused on both the breadth and a particular component of the Donald Trump presidency, the author of this book seeks to illuminate and call for accountability toward the myriad inconsistencies between promises and deliverables. From the Russia investigation to the concealed tax documents, the Supreme Court appointees and the constant turnover of staff, every remarkable fact or curiosity of Trump's White House is examined and scrutinized by the author.

Challenging the reader to resist rather than persist, these essays are a call to action for a country that has enjoyed prosperity for centuries but must also endure greater scrutiny on the global scale, especially in a digital age. Despite being a warning to the readers and to the country about the dangers of Trump's behavior both domestically and abroad, the author does manage to have a little creative fun while making his case known. At the end of the book, a short glossary is featured that contains many words relevant to the executive branch, their definition, and then an alternate definition in step with or tied to Trump's actions in office.

Readers who are either concerned for the state of affairs in this country and want to learn more about what makes this government abnormal, or those who wish to understand better why so many people are appalled or upset, will find this book very enlightening.
